Two dimensions of variation in lexical semantic representations:
— the nature of the representation, e.g., semantic roles, predicate decompositions — the model of event conceptualization, i.e., the organizing hypothesis
Semantic role representations reduce a verb's meaning to a set of roles assigned to its arguments.

Lexical semantics (also known as lexicosemantics), is a subfield of linguistic semantics. The units of analysis in lexical semantics are lexical units which include not only words but also sub-words or sub-units such as affixes and even compound words and phrases. Lexical units make up the catalogue of words in a language, the lexicon.

Since verbs are predicates of events, a theory of the lexical semantics of verbs must be a theory of which cognitively salient facets of events are relevant to argument realization---the mapping from lexical semantics to syntax. The course reviews the two leading approaches to event conceptualization: one takes events...

What is semantics? SEMANTICS is the technical term used to refer to the study of meaning. In both cases the term was not used simply to refer to meaning, but to its development - with what we shall later call historical semantics. Yet semantics does not occur

An important application of short text understanding is to calculate semantic similarity between short texts. In our previous research [1], semantic similarity has been proven to be much more preferable than surface similarity. However, incorrect segmentation of short texts leads to incorrect semantic similarity.

Semantics (from Ancient Greek: σημαντικός *sēmantikós*, "significant") is the linguistic and philosophical study of meaning in language, programming languages, formal logics, and semiotics. It is concerned with the relationship between signifiers—like words, phrases, signs, and symbols—and what they stand for in reality, their denotation.

Lexical Semantics is about the meaning of words. Although obviously a central concern of linguistics, the semantic behaviour of words has been unduly neglected in the current literature, which has tended to emphasize sentential semantics and its relation to formal systems of logic.
